-------------------------	--------------------

### **Executive summary**

Burbury Consulting is a Tasmanian-based specialist engineering and project management consultancy business that provides services across the civil, structural and maritime engineering industries. The business undertakes a range of engineering projects in Tasmania, interstate and overseas employing 12 full time staff with an additional 2 part time staff positions.

As a service provider to the Department of State Growth, Burbury Consulting can offer a range of services with specialist bridge engineering, civil engineering, project management and contract administration services.

Burbury Consulting's focus for business growth and development of skills within Tasmania is to recruit from the local market, including the development of undergraduates from local industry and the University of Tasmania, and to use their experience, skills and capability to train staff through in-house training and project delivery. In that way, Burbury Consulting is able to support local people, the local engineering and construction industry and provide a sustainable and high-level of service to the Department of State Growth.

Burbury Consulting currently engages with a network of Tasmanian-based specialist Consultants and Contractors for services that fall outside of our core capabilities, allowing them to support other local businesses and promote sustainable skills development in Tasmania. This approach has enabled provision of a wide range of specialist engineering services interstate developing both the Tasmanian skills and exposure to the national market but increasing market growth to Tasmanian SMEs.
