Procurement details

Procurement ID (TASNET number)	936002
Procurement title	Distribution Design Services Panel
Name of Responsible Agency/Entity	TasNetworks

Supplier details

Name of supplier	Peracon Australia Pty Ltd
-------------------------	---------------------------

Executive summary

Peracon is an Australian based private company, established in 2011, initially commencing operations with offices in Perth and Melbourne. As the company grew, additional offices were opened in order to support our local clients.

Based on Peracon's business growth approach and the recent acquisition of Lectel, we expect to establish a local office in Hobart in 2021, to support the local power distribution clients including TasNetworks, using local residents in the design and engineering fields.

For the TasNetworks Distribution Design, Engineering and Estimation Services panel, Peracon will provide professional site survey and design services. The design services do not involve the procurement of goods or materials, apart from the site survey and design tools and software required to perform the design works.

When the Hobart office is established, Peracon will identify and employ Tasmanian based resources, with necessary support from the other Peracon offices, depending on the workload allocated to Peracon.

Peracon is focused on providing value for money to TasNetworks.

This commences with having a team of qualified engineers and designers with a blend of Senior, Experienced and Graduate staff, and supported by an efficient business infrastructure, processes and management support.
